

# SecureNexus: Next-Generation Cybersecurity for Today's Enterprise Needs.

SecureNexus, headquartered in Mumbai, a leading provider of cybersecurity services, announces the launch of its innovative suite of products designed to protect businesses from evolving cyber threats. With a focus on end-to-end security, SecureNexus offers a comprehensive range of products and services to safeguard organizations' digital assets and ensure compliance with evolving regulations.

## Product Offerings:

AI's precision, Human's perception. Experience the next level of cybersecurity with our advanced AI driven products.

- **Attack Surface Monitoring:** Gain real-time insights into your organization's attack surface to proactively address vulnerabilities and emerging threats.
- **Software Composition Analysis:** Automate the tracking of third-party software components, vulnerabilities and create Software Bills of Materials (SBOMs) for efficient license management.
- **Cloud Security Posture Management:** Achieve centralized control over your cloud security posture with automated assessments and threat detection.
- **Third-Party Risk Management (TPRM):** Simplify vendor onboarding and assessments by gaining comprehensive understanding of the risks associated with your vendors, suppliers, and third-party service providers.
- **Vulnerability Management:** Obtain a centralized overview of vulnerabilities across assets and vendors with automated scanning and insightful dashboards.
- **Exception Management:** Streamline handling and oversight of security policy deviations efficiently.
- **Business Continuity Management:** Manage Business Impact Analyses (BIA) and develop Failover Recovery Plans (FRP) to manage continuity plans effectively, ensuring minimal downtime and sustained resilience.
- **IT Risk and Compliance Management:** Mitigate IT risks and ensure compliance with our comprehensive management tools.
- **Policy Management:** Create, implement, and maintain clear security policies to safeguard your organizational operations.

## Cybersecurity Services:

- **Continuous Security Testing:** Stay ahead of attackers with real-time testing that fortifies your systems against emerging threats, including newly discovered assets.
- **Application Security:** Protect applications against threats through detailed security assessments and expert insights.
- **Infrastructure Security:** Ensure infrastructure security and resilience with advanced assessments and expert guidance.
- **Red Teaming:** Evaluate security measures through simulated real-world attacks.
- **Cloud Security:** Assess and strengthen cloud security with expert assessments and recommendations.
- **Source Code Review:** Detect and address security flaws in source code to prevent potential vulnerabilities.
- **Red Teaming:** Evaluate security measures through simulated real-world attacks.
- **Threat Modelling:** Mitigate risks effectively with expert threat modelling assessments and tailored security strategies.
- **Other services:** Penetration Testing, Vendor Evaluation, API Gateway Security and Governance, DevSecOps Review, Security Workshops.

"We are thrilled to launch SecureNexus and provide organizations with the tools and expertise they need to navigate today's complex cybersecurity landscape," said Sunil Yadav, Director, and Founder of SecureNexus (A Division of x-Biz Techventures Private Limited). "With our comprehensive solutions and proactive approach to cyber security, we are committed to helping businesses stay ahead of threats and protect their digital assets."
